

HANDS

WORK TOGETHER TO FIGHT ILLNESS

Here's How To Keep Every Hand Clean >>

HELPFUL TIP:

How long should you wash your hands?

A full **20 seconds** of handwashing time is required to properly clean your hands.

1

RINSE

Remove all jewelry and accessories, and wet hands with warm water.

2

SOAP

Use a generous amount of soap to create a thick lather.

3

SCRUB

Vigorously scrub hands, wrists, fingers, and under nails for at least **20 seconds**.

4

RINSE

Rinse thoroughly under warm water.

5

DRY

Leaving the water running, dry hands with disposable towel and turn off the water using the towel.

6

SCAN

Place your hands under a PathSpot device for a result within two seconds. If contaminations is found, rewash and rescan immediately.

6 Handwashing Hotspots
